3. INSTALLATION

3.1 The installation of Johnsonite Rubber and Vinyl Wall Bases should not begin until the work of all other trades has been completed, especially overhead trades. Areas to receive wall base shall be clean, fully enclosed, weathertight, and maintained at a uniform temperature of at least 65°F for 24 hours before, during, and after the installation is completed. The wall base and adhesives shall be conditioned in the same manner. Coiled wall base shall be uncoiled and lay flat for at least 24 hours at 65°F prior to installation. Floors and walls shall be clean, dry, free of dust, all paints, wallpaper, and all other foreign material, which may affect proper adhesive bonding. Wall Base may be installed
on interior plaster, gypsum wallboard, concrete, masonry, mineral-reinforced cement board or similar porous surfaces. Wall Base shall not be installed on surfaces that will be exposed to drastic temperature changes or moisture.

3.2 Adhesives:
   Porous Surfaces
   Johnsonite 960 Acrylic Cove Base Adhesive
   Application: 1/8" square notch trowel
   Coverage: approximately 250 linear feet of 4" Wall Base

   Non-porous Surfaces
